

Position: Senior Technician - 1

Location: Bulebel, Zejtun, Malta

AIS Environment Ltd. is an independent environmental consultancy based in Malta, with more than 30 years of experience providing environmental and sustainability services to businesses and organizations. The company describes itself as the longest-running independent environmental consultancy in Malta.

Main responsibilities:

- Install, configure, commission, and troubleshoot BMS and ELV systems including controllers, field devices, associated software platforms, and carry out on-site programming and parameterisation in line with project specifications and operational requirements.
- Read, interpret and update electrical schematics, control drawings, and system documentation, and perform functional testing, diagnostics, and fault-finding ensuring timely identification and resolution of system issues.
- Support and where required lead on-site commissioning activities ensuring systems are stable, reliable and fully operational, and support the integration of BMS and ELV systems with IT infrastructure and third-party platforms resolving interface and communication issues.
- Liaise with internal engineers, project managers, suppliers, and clients to address technical queries and support ongoing system performance and take ownership of technical support activities on site ensuring issues are resolved efficiently and systems operate as intended.
- Deliver and support system handover activities including validation and documentation.
- Client familiarisation.
- Carry out preventive maintenance, service visits, and optimisation ensuring long-term reliability and performance of installed systems.
- Carry out on-call duties and out-of-office hours support as required

Required profile:

- Advanced or Higher Diploma (MQF Level 4 or 5) in Industrial Automation, Electronics, Controls, or equivalent with at least 3 years' experience in BMS, ELV, or related systems
- Electrical Licence A or B considered an asset
- Familiarity with BMS and ELV platforms, including automation, security, and monitoring systems, and protocols such as BACnet, Modbus, DALI and related integrations
- Experience with networked and IP-based systems, including basic troubleshooting of communication and integration issues
